```

```
ISOId=P21583-2; Sequence=VSP 006022;
-!- DEVELOPMENTAL STAGE: Acts in the early stages of hematopoiesis.
-!- PTM: A soluble form is produced by proteolytic processing of isoform in the extracellular domain.
-!- SIMILARITY: Belongs to the SCF family.
-!- DATABBASE: NAME=Atlas Genet. Cytogenet. Oncol. Haematol.;
WWW="http://www.infobiogen.fr/services/chromcancer/Genes/MGFID142.html".
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This Swiss-Prot entry is copyright. I "A primary Human-Horse comparative gene map.";
Submitted (JAN-2000) to the EMBL/GenBank/DDBJ databases.
I Submitted (JAN-2000) to the EMBL/GenBank/DDBJ databases.
I FUNCTION: Stimulates the proliferation of mast cells. Able to augment the proliferation of both myeloid and lymphoid hematopoietic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines, probably interleukins (By similarity).
I SUBGELLUIAR LOCATION: Type I membrane protein. Also exists as a secreted soluble form (By similarity).
I SUBCATE SOLUBLE form (By similarity).
I PTM: A soluble form is produced by proteolytic processing of the extracellular domain (By similarity).
I SIMILARITY: Belongs to the SCF family.

In coalization within the uterus.";

Biol. Reprod. 50:95-102(1994).

I. FORNCTION: Stimulates the proliferation of mast cells. Able to augment the proliferation of both myeloid and lymphoid hematopoietic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines.

I. SUBUNIT: Homodimer, non-covalently linked (Probable).

I. SUBCELLULAR LOCATION: Type I membrane protein. Also exists as a secreted soluble form (By similarity).

I. TYM: A soluble form is produced by proteolytic processing of the extracellular domain (By similarity).

I. SIMILARITY: Belongs to the SCF family.
                                                                                                                                                                                                                                                                        01-NOV-1997 (Rel. 35, Created)

-!- FUNCTION: Stimulates the proliferation of mast cells. Able to augment the proliferation of both myeloid and lymphoid augment the proliferation of both myeloid and lymphoid hematopoietic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines, probably interleukins (By similarity).
-!- SUBGURIT: Homodimer, non-covalently linked (Probable).
-!- SUBCELLULAR LOCATION: Type I membrane protein (isoforms 1 and 2) Also exists as a secreted soluble form (isoform 1 only) (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     G (in

-!- PTM: A soluble form is produced by proteolytic processing of
  isoform 1 in the extracellular domain (By similarity).
-!- SIMILARITY: Belongs to the SCP family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 / Match 83.3%; Score 1051.5; DB 1; Length 274; Local Similarity 76.6%; Pred. Yanaqisawa N., Tanaka S., Yamanouchi K., Tojo H., Tachi C.;

"Identification of splicing isoforms of caprine stem cell factor
"Identification of splicing isoforms of the two major isoforms,
gSCF825 and gSCF741, in the brain and the skin of adult and fetal
"I Shiba goats, Gapra hirtus.";
Submitted (MAR-1997) to the WBL/GenBank/DBBJ databases.

-I- FUNCTION: Stimulates the proliferation of mast cells. Able to
augment the proliferation of both myealoid and lymphold
hematopoietic progenitors in bone marrow culture. Mediates also
cell-cell adhesion. Acts synergistically with other cytokines,
probably interleukins (By similarity).

-I- SUBGRILUMAR LOCATION: Type I membrane protein. Also exists as a
secreted soluble form (By similarity).

-I- SUBCLIULAR LOCATION: Type I membrane protein. Also exists as a
secreted soluble form (By similarity).

-I- FTM: A soluble form is produced by proteolytic processing of the
extracellular domain (By similarity).

-I- SIMILARITY: Belongs to the SCF family.

PTM: A soluble form is produced by proteolytic processing of isoform in the extracellular domain (By similarity).
POLYMORPHISM: The roan locus is responsible for the coat coloration of Belgian Blue and Shorthorn cattle. The solid-colored and white animals are homosygotes, and the roan animals, with intermingled colored and white hairs, are heterozygous. The roan phenotype is due to the Asp-218 mutation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    ŏ

--- PTW: A soluble form is produced by proteolytic processing of isoform 1 in the extracellular domain (By similarity).
--- SIMILARITY: Belongs to the SCF family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (Potential).

-!- FUNCTION: Stimulates the proliferation of mast cells. Able to augment the proliferation of both myeloid and lymphoid hematopoietic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines, probabbly interleukins.
-!- SUBUNIT: Homodimer, non-covalently linked (Probable).

--- DEVELOPMENTAL STAGE: Acts in the early stages of hematopoiesis.
--- PTM: A soluble form is produced by proteolytic processing of isoform 1 in the extracellular domain.
--- SIMILARITY: Belongs to the SCF family.
                                                                                                                                                                                                                                                                                                                                                                                                                                    Ensemil; ENSKNOG0000005386; Rattus norvegicus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PURCTION: Stimulates the proliferation of mast cells. Able to augment the proliferation of both myeloid and lymphoid hematopolietic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines, probably interleukins. Synergistically with other cytokines, probably interleukins. Covalently linked (Probable). SUBCELDIAR LOCATION: Type I membrane protein (isoforms I and 2). Also exists as a secreted soluble form (isoform I only) (By

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             stages of hematopoiesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ISOId=P20826-2; Sequence=VSP_006023;
-1- DEVELOPMENTAL STAGE: Acts in the early stages of hematopoies:
-1- FTM: A soluble form is produced by proteolytic processing of isoform 1 in the extracellular domain.
-1- SIMILARITY: Belongs to the SCF family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                28;

SIMILARITY: Belongs to the SCF family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       FUNCTION: Stimulates the proliferation of mast cells. Able to augment the proliferation of both myeloid and lymphoid hematopoletic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines, probably interleukins (By similarity).

SUBUNIT: Homodimer, non-covalently linked (Probable).

SUBCELLULAR LOCATION: Type I membrane protein. Also exists as a secreted soluble form (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NUCLEOTIDE SEQUENCE OF 1-202.

Submitted (MAR-2003) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Stimulates the proliferation of mast cells. Able to augment the proliferation of both myeloid and lymphoid hematopoietic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines, probably interlevins (By similarity).

-!- SUBUNIT: Homodimer, non-covalently linked (By similarity).

-!- SUBCELULIAR LOCATION: Type I membrane protein (isoforms 1 and 2) Also exists as a secreted soluble form (isoform 1 only) (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SCF (Fragment).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                               US-10-620-642-63

1 Sequence 63, Application US/08336728A

1 Patent No. 6207802

2 GRERAL INPORMATION:

4 APPLICANT: Scabo, Krisztina M.

APPLICANT: Bosselman, Robert A.

APPLICANT: Buggs, Sidney V.

1 TITLE OF INVENTION: Stem Cell Factor

NUMBER OF SEQUENCES: 104

CORRESPONDENCE ADDRESS:

ADDRESSEE: Marshall, O'Toole, Gerstein, Murray & Borun STREET: 6300 Sears Tower, 233 South Wacker Drive CITY: Chicago

STATE: Illinois

COUNTRY: United States of America

ZIP: 6606-6402

COUNTRY: United States of America

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 63,
